
the tool

Generate a profile picture from a text prompt with GPT Image 2 or Nano Banana 2, each with a clear credit cost.

How to Make a PFP with AI

The tool turns a written idea into a profile picture in three steps — no camera or design skills needed.

1

Step 1: Choose an image model

Select a supported model and review the credit cost shown beside it.

2

Step 2: Describe your profile picture

Write a prompt for the character, expression, colors, and art style you want in your profile picture.

3

Step 3: Generate your avatar

Submit the task, wait for the model to finish, and review your new profile picture in the workspace. Adjust the prompt for another paid generation.
